

City-wide e-Procurement Performance Optimization
Proposal in Response to
Mayor's Office of Contract Services

[date]

This document is prepared by the Contractor, on the Contractor's station

Instructions

This template is to be used for Systems Integrator Proposals. The items in **[BOLDFACE]** are variables that should be changed to the specifics of the proposal in question. Notes are indicated in *italics* and provide additional information or instructions. This document is to be prepared by the contractor and submitted to the MOCS program manager, who will distribute the proposals to the evaluation team.

The proposals will be evaluated in five key areas, which align to the five sections of the proposal:

1. Relevant Project Experience
2. Solution Fit
3. Statement of Work (equivalent to Approach and Methodology)
4. Organization and Staffing (equivalent to Organizational Capability)
5. Fees (equivalent to Cost Proposal)

The weights for each area can be found in the RFS.

Executive Summary

Use this section to identify the Response Category (1 or 2, describe the contractor's understanding of the scope and objectives of the project, and summarize the contractor's approach, proposed staff, and estimated project duration.

Relevant Project Experience

The specifics for this section will vary depending on the nature of the project.

Description of Similar, Successful Projects

Describe at least three similar projects in which you successfully participated. Include, at minimum:

- *Start and end dates of project*
- *Number of staff on project*
- *Contractor's role in the project*
- *Business need being addressed*
- *Target Audience, including approximate number of users*

- *Technical solution deployed*
- *Final results of project*

References

For each project described above, please provide a client reference including:

- *Organization*
- *Name and Title*
- *Project Role*
- *Phone number*
- *Email address*

The evaluation committee may elect to contact the references during the evaluation process, so please ensure that the listed references are aware and agreeable to being contacted.

Solution Fit

Technical Requirements

***All proposers** must complete the following Infrastructure Requirements section.*

REQ #	Infrastructure Requirement	Category
1	Describe how your architecture allows for load balancing and workload distribution? Attach a reference architecture, covering both the hosting environment and application architecture.	Architecture
2	Describe how your solution tracks the following metrics: • Availability (e.g. uptime, responsiveness, etc.) • Response times. • Web, application, and OS processes. • Database queries, I/O operations. • Throughput (Requests, Transaction volumes) • CPU, memory, network, and database utilization • Active users • Error rates (OS, DB, and application) • Garbage collection (available memory, cleanup frequenc	Performance Management

REQ #	Infrastructure Requirement	Category
3	Describe how you add new monitoring parameters.	Performance Management
4	Describe how you detect and report performance degradation.	Performance Management
5	Detail your logging and error tracking process. Include the list of items logged and tracked.	Performance Management
6	Describe how your solution provides high availability and scalability through dynamic resource allocation for the following resources: • Processing power • Memory • Database capacity • Network bandwidth • Application server capacity	Architecture
7	Describe your security model for the hosing infrastructure and the application.	Security

REQ #	Infrastructure Requirement	Category
8	What safeguards does your solution provide to prevent users from inadvertently impairing system performance.	Performance Management
9	Detail your approach to providing comprehensive database monitoring.	Performance Management
10	Describe your process for guaranteeing database consistency.	Performance Management
11	Describe the disaster recovery options included in your solution.	Architecture
12	List the environments that are included in your solution?	Architecture
13	Provide a comprehensive description of your process for problem identification, root cause determination, and resolution?	Architecture

Performance Requirements

REQ #	Requirement
1	99.9% of the time, a minimum of 2,500 concurrent users must have consistent access to system logins and user functions during which individual users must not experience timeouts or other instability that would meaningfully impact their ability to do work. Describe how your solution provides this.
2	The solution must demonstrate scalability, i.e., if CPU utilization, memory allocation, database performance, or other essential resources cross critical thresholds, the solution must be able to provision the necessary resources to prevent degradation and/or restore acceptable system performance. Describe your approach to providing this.

In order to fulfill the above Performance Requirements, the hosting solution must provide real-time monitoring of key performance metrics, to be agreed upon with MOCS. The hosting architecture and real-time monitoring metrics must be made available to MOCS Staff. ***All Proposers*** *must detail the application performance metrics they will be monitoring, describe how each impacts overall system performance, the frequency at which the metric will be reported, and the acceptable range of metric values.*

Metric #	Name and Description of Metric	Acceptable Range	Frequency
1			
2			
3			
4			
5			
6			
7			
8			

Functional Requirements

In addition to the prior two sections, ***All Category 2 Proposers*** *must complete the following functional requirements section. Please review the detailed functional requirements in Appendix F of the RFS for fuller functional descriptions.* Please provide responses to each category requirement below:

REQ #	Functional Requirements	Functional Area
Vendor Management	**In the sections below, please describe the degree to which your solution provides the indicated vendor functionality.**	
VM01	Self-service capture of all indicative, background, and performance vendor information. Vendor and principal disclosure, vendor caution, and performance evaluation capture and management should all be supported.	Vendor Management
VM02	Manage Pre-Qualified Lists (PQLs). Each PQL must be tied to a Managing Agency that is responsible for requesting the creation of a PQL and managing a Vendor's qualification to the PQL. PQLs can be flagged as citywide or for use by the Managing Agency only.	PQL Management
VM03	Manage vendor responsibility determinations, including all required reporting from City and external resources.	RD Management
VM04	Provide vendor ability to store and manage documents. Vendors should be able to upload specified document types and pull documents from their vault to their proposals, contracts, invoices, vendor disclosures, and/or PQL Applications.	Document Vault
VM05	Provide vendor budget management, including certification of funds, invoice and payment tracking, advances, and recoupments.	Budget Management
VM06	Provide subcontractor management functionality to facilitate the current subcontractor management process. This includes subcontractor submission and approval, subcontract modifications, and capture of payments made to subcontractors.	Subcontractor Management
VM07	Allow vendors and agencies to monitor progress towards M/WBE goals for a given contract.	M/WBE Utilization

REQ #	Functional Requirements	Functional Area
Catalog Management	**In the sections below, please describe the degree to which your solution provides the indicated catalog management functionality.**	
CM01	Establish import process for goods catalogs sourced from established master agreement contracts. Items from catalogs can be viewed citywide for purchase requisitions.	Catalog Management
CM02	Allow for internal business and financial approvals of good purchase requisitions before funds being encumbered and sent to the vendor for fulfillment. An order module enable vendors to view and manage orders and mark estimated delivery dates.	Requisition and Ordering
CM03	Create receipts to mark the confirmed delivery of goods to the agency with verified quantities. Vendors can create invoices to be paid that will undergo a system match against what was ordered and what was received and internal agency business and financial review prior to disbursement from FMS.	Receiving and Invoicing
Source to Contract	**In the sections below, please describe the degree to which your solution provides the indicated catalog management functionality.**	
STC01	Contract requisition, solicitation, creation, and management.	Source to Contract
STC02	Organize Requisitions, Sourcing Projects into different Programs according to thematic city initiatives.	Organization
STC03	Request direct~~or~~ orders for goods, services through task orders or prompt the initiation of a new sourcing event or contract action.	Requisition
STC04	Support pre-solicitation review assessing the existing market for goods, services, or construction; to estimate the expected cost; and to select the most appropriate method for the City's need.	Pre-Solicitation
STC05	Draft procurement solicitations and issue/publish solicitations to vendors that have been selected in accordance with the PPB rules.	Solicitation

REQ #	Functional Requirements	Functional Area
STC06	Evaluate vendor responses to solicitations in accordance with PPB rules and other City initiatives, including multiple rounds or addenda, open-ended solicitations, and real-time bidding.	Evaluation
STC07	Link a responsibility determination to the selected vendor and create a recommendation for award to a vendor. Submit recommendation for approval by oversight agency administrators.	Award
STC08	Draft vendor contracts and engage in collaborative editing and negotiation between City and vendor. Execute completed contracts, and conduct oversight, review and approve finalized contracts, request and calendar public hearings, perform Contract certification of funds, and submit the registration package to the Comptroller's Office.	Contract
STC09	Provide full functionality for contract amendment and change order management.	Amendments
STC10	Establish contract functionality to allow agencies to register and manage Master Agreements (MA1, MMA1, MAR) directly from PASSPort. This includes contract modifications, the creation of new agreements and task order management including supporting different task order rotation models.	Master Agreement Registration (MA1/MMA1/MAR)
Finance	**In the sections below, please describe the degree to which your solution provides the indicated catalog management functionality.**	
FIN01	Enable agencies to manage their certification of funds, encumbrances, and accounting lines. This functional need will exist across relevant requisition, contract, contract amendment/ change orders, order, and invoice operations.	Financials Management
FIN02	Budget and encumbrance management includes validation and submission capabilities, as well as management of oversight and approval workflows.	FY Budgeting & Encumbrance
FIN03	Provide invoicing and receiving modules for direct orders, general contracts and task orders along with supporting budget and encumbrance integrations with the City's financial management system. This functionality features workflow rules, agency approval business requirements, and payment details set-up.	Invoicing & Receiving (CT1/CTA1)

REQ #	Functional Requirements	Functional Area
FIN04	Enable submission of contract budgets from vendors for contracts and purchase orders.	Vendor Contract Budget
FIN05	Enable management retainage terms on contract budgets and related invoices.	Capital Management
FIN06	Dynamic and well-managed flexible pricing and blanket order options to support specialized purchase needs such as fuel purchases and bulk supply fulfillment.	Fuel Pricing/Blanket Order
FIN07	As disbursements are issued by the City's financial management system, order, invoice, and disbursement integrations will be real- or near-real-time to ensure best practice and provide operational transparency and integrity.	Financial system integrations
FIN08	Support different funding structures across functional modules; these structures include capital, expense, and mixed budgets.	Mixed Funding Contract Submissions
FIN09	Allow for payment advances and recoupment on those advances.	Advances and Recoupment
Data Requirements	**The following items provide a description of data requirements to support transactions with external systems and reporting functionality.**	
DR01	Enable integrations required to support the above functionality with respect to City authentication, financial, and budget systems hosted by the City's Office of Technology Innovation (OTI), Financial Information Services Agency (FISA), and the Office of Management and Budget (OMB). Standard integrations protocols (API, FTP, LDAP, etc.), security provisions, and management tools (scheduling, monitoring, etc.) must be supported.	Integration
DR02	Provide programmatic and user-accessible read-level access to all application data, allowing for customizable standard query methods (SQL or SQL-like queries) to retrieve filtered data outputs in a variety of structured formats (for example, MS Excel, csv, xml, etc. files).	Reporting
Document Vault	**The following items provide a description of document management and sharing capabilities.**	

REQ #	Functional Requirements	Functional Area
DV01	This module allows Vendor, Agency, and Admin users in PASSPort to manage documents within their organization's PASSPort Vault, organizing, uploading, and searching for documents. Documents can be shared between organizations but cannot be archived or deleted once shared. Unshared documents can be archived but restored if needed. Users can view and download read-only documents sent by other organizations but cannot edit or link them.	Document Management
DV02	The system shall allow agencies to select document submission requirements for vendors to upload as part of certain steps in the procurement lifecycle. Both agencies and vendors can link requested documents either from their local device or link an existing document from their respective document vault. In certain cases, documents linked to PASSPort objects will be converted to PDF format for viewing or download.	Document Linking
Global and Homepages	**The following items describe system capabilities to configure homepage, menus, approval rules, as well as access based on user profiles and authorizations.**	
GH01	The system shall allow the configuration and design for PASSPort global pages.	Homepage Configuration
GH02	The system shall allow mapping new and baseline user profiles and authorizations, determining access privileges to determine which homepage features are available based on a user's profile combinations.	Profiles and Authorizations
GH03	The system shall allow users with the MOCS Admin profile to manage agency rules, defining levels of approval within an agency, routing tasks for oversight agency approval or delegating approvals. The business rules shall allow the dollar threshold dimension to be formatted as "greater than or equal to"; tasks will then be routed to pre-defined agency users. For delegation rules, formatted as "less than or equal to", the system assigns the task to a designated user and auto-completes the delegated steps.	Approval Rules

REQ #	Functional Requirements	Functional Area
GH04	The system shall provide a facility to configure and generate electronic procurement identification number (E-PIN) for sourcing projects, contracts, contract management actions, and encumbrance change contracts. When searching for sourcing projects, contracts, requisitions, and POs, the user should be able to enter a partial or full E-PIN and the relevant objects will populate on the browse screens.	E-PIN Generation
GH05	The system will generate PDFs based on created templates that will pull data fields from various points throughout the Contract Object. System-generated documents will be given a new naming convention at the time which they are generated and then sent to the agency's document vault.	System Generated Documents
GH06	The system shall provide configuration to allow certain system objects to use the document vault (link documents to objects) or the standard system attachment functionality. Provide facility to configure types of documents that user can upload when document vault linking is allowed.	Document Vault configuration

Statement of work

Objectives

State your understanding of the project's objectives and goals.

Approach and Methodology

Describe the approach and methodology to be used in this project (e.g., prototyping, RAD, Agile, COTs products, etc.)

Project Scope

Include the following in this section:

- Contractor's needs – e.g., desk space, development and test environments, etc.
- Proposed acceptance criteria and process for project deliverables
- How the Contractor will interact with the City's staff, Requirements Definition and/or Project Monitoring contractors, as applicable
- List of tasks, by phase, per the sample below. Include resources assigned to those tasks, estimated duration, and critical milestones. Actual project phases will vary depending on the project scope:

Phase	Task	Resource	Estimated Duration
Initiation			
Analysis and Design			
Build			
Test			
Implement			
Document			
Train			
Operations and Support			
Knowledge Transfer			
Post-Project Review			

Work Products and Deliverables

Describe the deliverables for this project. Below are examples; specific deliverables will vary depending on the project scope.

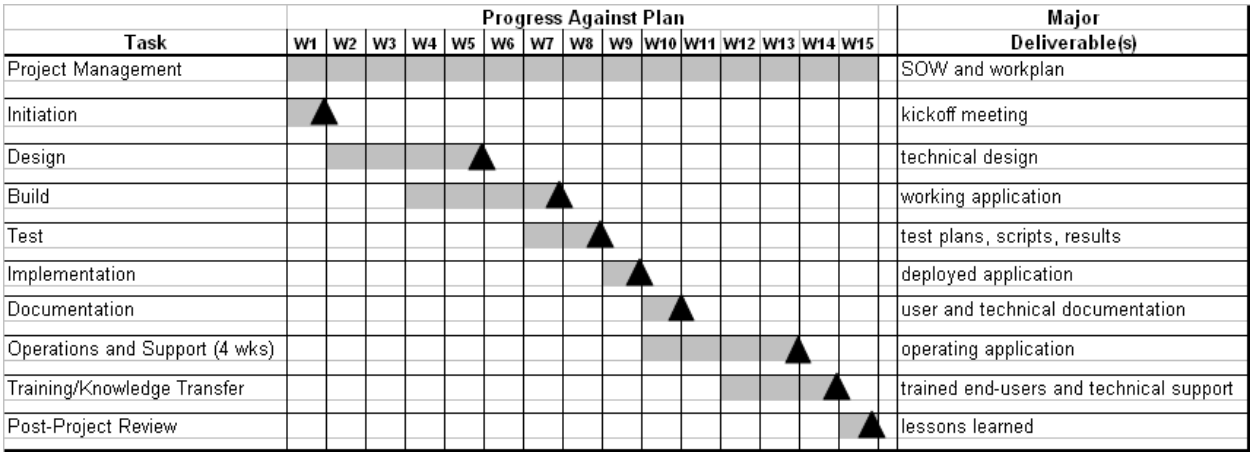

Phase	Deliverable	Description
Initiation	Project Workplan	A workplan document with a hierarchical representation of tasks, consisting of start and end dates, dependencies, and resources
Design	Design Document (planned and as-built)	A text document containing a detailed design of each aspect of the implementation. The Design Document should include a security approach strategy.
Build	Unit Test Results	A text document and attachments containing results of unit testing (peer review documents)
Test	Test Plan	A text document describing the test approach, including the test cycle, conditions, expected results definitions.
Test	Test Scripts	A text document and attachments containing Unit and assembly test scripts
Test	Test Results	A text document and attachments containing results of the testing
Implementation	Production Application	A working application live in production.
Documentation	Technical documentation	Runbook, technical architecture blueprint, application/database manuals, class hierarchies, etc. that are determined to be necessary. Each document should be listed as a separate deliverable.
Documentation	Deployment and back-out plans	Step-by-step procedures for deploying and backing out the code, modules, templates, deployment scripts, data, files, network and firewall changes and user accounts required to go live in production.
Training/Knowledge Transfer	Transition Plan	A text document describing the steps necessary to enable City staff to support and maintain the application in production.
Ongoing	Status Reports	Contractor will provide weekly status reports about the project and progress to schedule.

Project Timeline

[Contractor Name] shall undertake the work effort detailed in this proposal within **[time period],** with **[additional time period]** reserved for monitoring and support. The project is scheduled to begin **[fill in date].** The Gantt chart in this proposal illustrates the high-level schedule for the project and indicates the required deliverables and due dates.

The overall timeline and schedule is illustrated below:

Below is an example timeframe and schedule:

Category 1 Solutions. We expect the initial and most substantive phase to be completed within eight (8) months, depending on vendor readiness, onboarding of resources, and stakeholder cooperation by City Hall and Agency resources. Subsequent phases, addressing additional tiers or products should be completed within the following twelve (12) months. Below are the suggested Phase 1 Timetable and Work Breakdown. **Category 2 Phase 1 cost should be priced separately from all future phases.**

Category 1 Phase 1 Timetable

Month 1	Project setup & analysis of current environment
Month 2	Complete Phase 1 environment design
Month 3	Stand up test environment
Month 4	Implement test system
Months 5	Complete design of performance evaluation criteria
Months 6-8	Migrate to production

Category 1 Phase 1 Work Breakdown

	Phase	Deliverable	Estimated Completion
1	Planning & Requirements	Project work plan	Month 1
2	Planning & Requirements	Phase 1 evaluation criteria	Month 2
3	Planning & Requirements	Phase1 test plan	Month 2
4	Design & Development	Detailed hosting environment design, including accurate reference architecture.	Month 3
5	Design & Development	Detailed multi-tier application design, including accurate reference architecture. Detailing all components.	Month 3
6	Design & Development	Test Implementation plan	Month 3
7	Design & Development	Production implementation plan	Month 5
8	Pre-Release	End-to-End Testing	Months 7-8

9	Pre-Release	User Acceptance Testing and Approval	Months 7-8

Category 2 Solutions. In solutions involving the introduction of software replacing PASSPort functionality in whole or in part, we expect a sandbox environment to be established and a comprehensive gap analysis to all existing functionality along with separate business process engineering to be completed within eight (8) months, with full implementation/integration and migration to be completed within the following eighteen (18) months, with dependency on vendor readiness, onboarding of resources, and stakeholder cooperation by City Hall and Agency resources. **Category 2 Phase 1 cost should be priced separately from all future phases.**

Category 2 Phase 1 Timetable

Month 1	Implement sandbox environment. Identify Business process re-engineering team
Month 2	Define scope of targeted replacement functionality. Launch BPR.
Month 3	Commence Gap Analysis.
Month 6	Complete gap analysis of targeted functionality
Month 7	Complete Business Process Re-engineering
Month 8	Submit Gap Analysis and BPR reports. Submit initial integration and migration plans.

Category 2 Phase 1 Work Breakdown

	Phase	Deliverable	Estimated Completion
1	Planning & Requirements	Project Work Plan	Month 1
2	Planning & Requirements	Functional Requirements Validation Document.	Month 2
3	Planning & Requirements	Business process re-engineering plan.	Month 2
4	Design & Development	Detailed hosting environment design, including accurate reference architecture.	Month 3
5	Design & Development	Detailed multi-tier application design, including accurate reference architecture. Detailing all components.	Month 3
6	Design & Development	Functional integration specification	Month 4
7	Design & Development	Gap Analysis Report	Month 8
8	Design & Development	BPR Specification	Month 8
9	Design & Development	Integration and Migration Plan	Month 8

Project Scope Exclusion

Explicitly list what is outside of the scope of the project; for example, if the Requesting Agency has reserved any procurement responsibilities for itself. Generic exclusions are not acceptable.

Form, Content and Frequency of Reports

<Describe the Reports that will be submitted by the Contractor for this project.>

Title of Report	Form and Content	Frequency

Assumptions

Contractor should insert any Assumptions here. This may include the provision of resources or facilities by the Requesting Agency. Any assumptions that conflict with the terms and conditions of the Agreement are deemed null and void. For example, the percentage of work that contractor personnel will perform off-site, specific software or system access that is required.

Project Staffing and Organization

Staffing

The Contractor will provide a minimum of the following resources to perform the work described in this proposal. Unless otherwise indicated, all assigned staffing is full-time.

This list should include subcontractors as well. If a resource is a subcontractor, this should be clearly indicated. Key Personnel should be denoted with an asterisk (*).

Category 1 responders are expected to staff the following Personnel roles.

Resource	Project Role	Labor Category	Hourly Rate
	Project Manager*	Project Manager I	
	Technical Project Lead*	Programmer II	
	Lead Infrastructure Architect*	Programmer II	
	Sr. Application Solution Engineer*	Programmer II	
	Senior Database Engineer*	Programmer II	
	Senior Implementation Engineer*	Programmer I	
	Implementation Engineer(s)	Programmer I	

Category 2 responders are expected to staff the following Key Personnel roles, in addition to the above positions.

Resource	Project Role	Labor Category	Hourly Rate
	Business Analyst Lead*	Analyst II	
	Quality Assurance Lead Lead*	Analyst II	

	Business Analyst(s)	Analyst I	
	Quality Assurance Analyst(s)	Analyst I	
	Business Process Re-engineering (BPR) Lead	Analyst II	
	Change Management Lead	Analyst II	

Unless otherwise indicated in the solicitation, for each resource listed, provide a resume and at least one client reference – preferably from one of the projects referenced in Section 2. The City may elect to contact the references during the evaluation process, therefore any references listed should be aware that they may be contacted. The client reference should include organization, name, title, relationship to the resource (e.g., project manager, supervisor, etc.), phone number and email address.

If the proposed solution entails new software implementation and/or implementation in or migration to a cloud environment, platform, or framework, the resumes must reflect a minimum of five years' experience working in the targeted environment.

If Prevailing Wage labor will be used, the prevailing wage mark-up should be specified in this section.

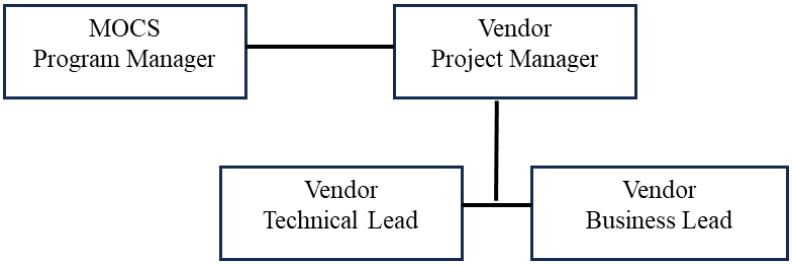

If non-U.S. labor will be used, the Discounted Hourly Rate should be specified in this section. (Reminder: if non-U.S. labor will be used, the Requesting Agency should review Attachment SCY and consult with MOCS IT Security.)

If specialized subcontractor personnel will be used, these personnel, their specialty and their Cost-plus Hourly Rate should be specified in this section. Please see additional restrictions on the use of these personnel in section 14.10 of the Agreement

Organization

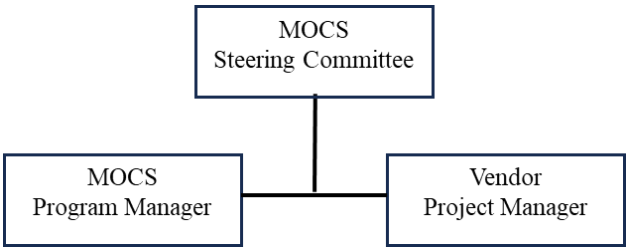

The project team will be organized as follows:

Please provide an organization chart showing the contractor's organization for this project, and how it will interact with the City's staff and other entities. Also include a narrative describing the organization and interactions. Below is an example of an organization chart:

Governance Structure

Describe the governance structure of the project.

Fees

Note: *The City requires that all proposals for these services include a fixed-price, deliverables-based payment structure. Fixed-price proposals must show the basis for computing the total cost per deliverable including the estimated hours and associated hourly rates. In addition to fixed-price proposals, contractors may submit alternative pricing proposals for consideration, such as time and materials. The City reserves the right to select the payment approach that it believes is in the best interest of the City.*

The Contractor proposes that the services and deliverables defined in this proposal will be performed at rates not exceeding those defined in the Agreement. The estimated total cost for the services and equipment included in this proposal are **[indicate amount]**.

Contractor to complete Attachment E – Price Proposal Worksheet based on the guidance below: **All Category1 & 2 proposals should provide separate pricing for Phase 1**

Note: *If the City has authorized the Contractor to perform Services outside of the United States, state the applicable discount and indicate which rates are Discounted Hourly Rates.*

Staffing Plan

In tab "Staffing Plan" Indicate the fees for labor by task and deliverable. Include tasks and deliverable for **ALL PHASES** required to complete the proposed solution

				YEAR 1		YEAR 2		YEAR 3		YEAR 4		YEAR 5		YEAR 6		TOTAL (6 Years)	
Deliverable	No.	Proposer Resource Title	Proposer Hourly Rate	Estimated Hours	Total Cost	Estimated Hours	Total Cost	Estimated Hours	Total Cost	Estimated Hours	Total Cost	Estimated Hours	Total Cost	Estimated Hours	Total Cost	Estimated Hours	Total Cost

In tab "Total Charges" include all the following:

Software/Subscriptions

Identify any packaged and/or operating system software costs associated with this project. Note any volume or packaging discounts which apply, as well as the licensing structure used by each software vendor (e.g., server-based concurrent users, etc.). Indicate the percentage mark-up, if any, (not-to-exceed that specified in Attachment PRC); for maintenance and support services no mark-up (0% mark-up) applies. Prior to purchase, all software licenses must be approved per section 6.8 of the Agreement.

Hardware

Indicate, to the greatest extent possible, any and all hardware acquisitions necessary to support the proposed solution(s) described in the project proposal. Indicate the percentage mark-up (not-to-exceed that specified in Attachment PRC); for maintenance and support services no mark-up (0% mark-up) is permitted.

Note: All hardware and software purchases should be at or below the lessor of Contractor's discounted prices, NYS OGS prices or GSA Schedule commercial list price.

Phase 1

Contractor can use sample "Phase 1" tab to indicate Phase 1 staffing requirements in the "Phase 1" tab, and complete either category 1 phase 1 or category 2 phase 1 tables depending on approach and numbers will auto-populate under section 4 in "Total Charges" tab or use own template.

Post-Implementation Support and Maintenance

Indicate any applicable ongoing annual fees (such as license fees, maintenance, training, etc.) Assume, unless otherwise indicated, that there is no overlap between final acceptance, warranty, and maintenance periods. No mark-up (0% mark-up) permitted for maintenance and support services.

Note: The City has the right to select a subset of the quoted goods and services to purchase from the Contractor. These rights include, but are not limited to, deciding to purchase software or hardware from another source (including directly from the software or hardware vendor) if the Contractor's proposed pricing is not the most favorable option available to the City.

Other Charges

Include below any other fees/charges not covered in the above categories.

Performance Outcome Measures & Financial Incentives

Contractors are invited to list and describe outcome measures of the work to be performed by them and the related financial incentives/disincentives that could potentially be applied to this contract, either in whole or in part.

Grand Total

Enter the subtotals from each of the above categories and calculate the Grand Total.

						YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5	YEAR 6	TOTAL (6 YEARS)
Category	No.	Unit Type	Quantity (If Applicable)	Comments		Annual Cost	Annual Cost	Annual Cost	Annual Cost	Annual Cost	Annual Cost	Total Cost
1: Staffing					Discount %							
Deliverables Staffing	1		0			$ -	$ -	$ -	$ -	$ -	$ -	$ -
Subtotal						$ -	$ -	$ -	$ -	$ -	$ -	$ -
2: Software/Subscriptions					Discount %							
	1											$ -
	2											$ -
	3											$ -
Subtotal						$ -	$ -	$ -	$ -	$ -	$ -	$ -
3: Hardware					Discount %							
	1											$ -
	2											$ -
	3											$ -
4: Phase 1-					Discount %
